

# H3C S5570S-El Series High Performance Intelligent Ethernet Switch

Release Date: July, 2023

## **Product Overview**

H3C S5570S-EI is a new generation of high-performance, high-port density, high-security and easy-to-install intelligent managed Gigabit Ethernet switches developed by H3C using industry-leading ASIC technology, supporting IPv4/IPv6 dual-stack management and forwarding, supports static routing protocols and routing protocols such as RIP, OSPF, IS-IS, BGP, etc., and supports rich management and security features.

H3C S5570S-EI products are mainly positioned at the access layer and aggregation layer of enterprises and campuses, meeting high-density Gigabit access, fixed 10 Gigabit uplink ports, supporting PoE+, and building high-performance end-to-end IP network solutions with other H3C products.

H3C S5570S-EI series Ethernet switch includes the following models:

- S5570S-28S-EI: 24 x 10/100/1000BASE-T Ethernet ports, 4 x 1G/10G BASE-X SFP+ ports;
- S5570S-54S-EI: 48 x 10/100/1000BASE-T Ethernet ports, 6 x 1G/10G BASE-X SFP+ ports;
- S5570S-28S-HPWR-EI-A: 24 x 10/100/1000BASE-T Ethernet ports (PoE+), 4 x 1G/10G BASE-X SFP+ ports;
- S5570S-54S-PWR-EI-A: 48 x 10/100/1000BASE-T Ethernet ports (PoE+), 6 x 1G/10G BASE-X SFP+ ports;
- S5570S-36F-EI: 24 x 100 /1000BASE-X SFP ports, 8 x 10/100/1000BASE-T ports, 4 x 1G/10G BASE-X SFP+ ports;
- S5570S-54F-EI: 48 x 100/1000 BASE-X SFP ports, 6 x 1G/10G BASE-X SFP+ ports;
- S5570S-30MS-UPWR-EI: 24 x 100/1000/2.5GBASE-T Ethernet ports (PoE++), 6 x 1G/10G BASE-X SFP+ ports;

## Features

#### SmartMC (Smart Management Center)

As the network scale increases, a large number of access devices are required at the network edge, which makes the management of these devices very cumbersome. The main purpose of SmartMC is to solve the problem of centralized management of a large number of scattered network devices. It is designed to solve the switch-based operation and maintenance tasks of small enterprises. SmartMC provides unified operation, maintenance, and management of the network by built-in graphical operation platform.

SmartMC simplifies the operation, maintenance, and management of Small and Medium-sized campuses:

- **Smart management:** includes device role selection, FTP server configuration, global configuration, and network management port configuration, etc.
- **Intelligent operation and maintenance:** include group management, equipment, or group upgrade backup, monitoring and equipment failure replacement, etc.
- **Visualization:** includes networking topology visualization and management, device list display, device ports display, etc.
- **Smart business:** includes user management, etc. After network access users are created and successfully activated, these users can access the SmartMC network through the one-key-armed port.

The H3C S5570S-El series switches can be used as the management device of SmartMC. You can log in to the SmartMC network through the S5570S-El to manage the entire network in a unified manner.

## **Visualization Ability**

H3C S5570S-EI series switches support Telemetry technology, which can push real-time resource information and alarm information of the switch to the operation and maintenance platform through the gRPC protocol. Network quality backtracking, risk warning, architecture optimization and other functions accurately guarantee user experience.

#### High-performance IPv4/IPv6 Service Capabilities

H3C S5570S-EI series switches implement a hardware-based IPv4/IPv6 dual-stack platform, support a variety of tunnel technologies, rich IPv4 and IPv6 Layer 3 routing protocols, multicast technologies and policy routing mechanisms, providing users with complete IPv4 /IPv6 solution.

#### H3C Intelligent Resilient Framework 2 (IRF2)

H3C Intelligent Resilient Framework 2 (IRF 2) virtualizes multiple S5570S-EI switches into one virtual switch and provides the following benefits:

- **Scalability**: IRF 2 allows you to add devices to the IRF 2 system easily. It provides a single point of management, enables switch plug-and-play, and supports software auto-update for software synchronization from the master to the new member devices. It brings business agility with lower total cost of ownership by allowing new switches to be added to the fabric without network topology change as business grows.
- **High availability:** The H3C proprietary routing hot backup technology ensures redundancy and backup of all information on the control and data planes and non-stop Layer 3 data forwarding in an IRF 2 fabric. It also eliminates single point of failure and ensures service continuity.
- **Redundancy and load balancing**: The distributed link aggregation technology supports load sharing and mutual backup among multiple uplinks, which enhances the network redundancy and improves link resources usage.
- **Flexibility and resiliency**: The switch use standard GE ports instead of specialized ports for IRF links between IRF member devices. This allows customers to assign bandwidth as needed between uplink, downlink, and IRF system connections. In addition, an S5570S-EI IRF fabric can span a rack, multiple racks, or multiple campuses.

#### **Comprehensive Security Control Policies**

Endpoint Admission Defense (EAD), in conjunction with the backend system, integrates endpoint security (including anti-virus and patching) and network security (including network access control and access right control) into an interactive security system. By checking, isolating, repairing, managing, and monitoring the endpoints, this system turns reactive single-point defense to proactive, all-round defense, and dispersed management to centralized policy management. This system enhances the overall network protection against numerous security threats and improves the responsiveness to new threats.

The switch supports unified MAC address authentication, 802.1x authentication, and portal authentication; dynamic or static binding of user identifiers such as user account, IP address, MAC address, VLAN, and port number; and dynamic application of user profiles or policies (such as VLAN, QoS, and ACL) on users. Using the switch in conjunction with H3C IMC, you can manage and monitor online users in real time and take prompt action on illegitimate behaviors.

The switch offers a large number of inbound and outbound ACLs and VLAN-based ACL assignment.

The switch supports Unicast Reverse Path Forwarding (uRPF), which protects a network against source spoofing attacks, preventing DoS and DDoS attacks and implement security mechanisms against DoS-type attacks, such as SYN flood, ICMP flood and Smurf.

#### **Multiple Reliability Protection**

The S5570S-EI series switches have multiple reliability protections at the device level and link level.

The S5570S-EI series switches support the reliability design of dual pluggable AC and DC power modules, and can flexibly configure AC or DC power modules according to the needs of the actual environment. In addition, the whole machine also supports power supply and fan fault detection and alarms. These designs enable the equipment to have higher reliability.

In addition to device-level reliability, the product also supports a wealth of link-level reliability technologies, including LACP/STP/RSTP/MSTP/Smart Link/RRPP fast ring network protection mechanisms and other protection protocols, and supports IRF2 intelligent elastic architecture, supports 1: N redundancy backup, supports ring stacking, which greatly improves network reliability. When the network carries multiple services and large traffic, it does not affect the network convergence time, ensuring the normal operation of services.

It supports basic network protection mechanism functions, and supports various types of protection, such as ARP protection. When the ARP rate exceeds the attack threshold, users who have attack behaviors are isolated.

#### Abundant QoS Features

The S5570S-EI series switches offer abundant QoS features, including:

- Packet filtering based on packet header fields from Layer 2 through Layer 4, including source MAC, destination MAC, source IP, destination IP, TCP/UDP port number, protocol type, and VLAN.
- Flexible queuing and scheduling algorithms configured on a per-port or per-queue basis, including strict priority (SP), weighted round robin (WRR), and SP+WRR.
- Committed access rate (CAR) with the minimum granularity at 16 kbps.
- Port mirroring in both outbound and inbound directions for network monitoring and trouble shooting.

#### **Outstanding Management Capacity**

The S5570S-El series switches provide a variety of management features and is easy to manage. It offers the following device management features:

- Provides multiple management interfaces, including the console port, USB port.
- Supports configuration and management from CLI or a general-purpose Web-based manager, including H3C IMC Intelligent Management Center and OpenView.
- Supports multiple access methods, including SNMPv1/v2c/v3, Telnet, and more secure SSH 2.0.

To help customers gain visibility into network application traffic, the switch provides a variety of traffic monitoring and analytic tools, including local port mirroring and Layer 2 remote port mirroring. With these tools, customers can specify multiple monitor ports and collect network traffic data to evaluate network

health status, create traffic analysis reports, perform traffic engineering, and optimize resource allocation.

#### **Application-Driven Campus**

H3C S5570S-EI series switches support H3C Application-Driven Campus (AD-Campus) Solution. AD-Campus is innovative campus network solution which aims to achieve great integration and convergence to easily reflect intent to network operation. With full lifecycle, open architecture and deep intelligence, AD-Campus is along with partner to be committed to solve existing challenges and assist customers to accelerate digital innovation and transformation.

#### **Professional Surge Protection Function**

H3C S5570S-EI series switches use professional built-in surge protection technology and support the industry-leading 10KV service port surge protection capability, which greatly reduces the damage rate of surge strikes to equipment even in harsh working environments.

#### **Cloud Empowerment, Simplified Network**

H3C S5570S-EI series switches support H3C Cloudnet solution. Cloudnet empowers the network through unified operation and maintenance cloud, enabling minimal network deployment, achieving minute-level deployment, zero on-site operation and maintenance, and shortening the time for customer business to go online; AI empowerment enables minimal network operation and maintenance, intelligent network optimization, fault prediction, and provides customers with an excellent user experience; Cloudnet can also empower business, and provide customers with business innovation through strong data operation capabilities. Improve the effectiveness of corporate operations.

#### Fast PoE, Perpetual PoE

- **Fast PoE:** Typically, PIs (power interface) does not deliver power to PDs (powered device) the moment the PSE (power sourcing equipment) is powered on but wait until the PSE completes startup. Fast PoE enables PIs to deliver power to PDs within few seconds after power is supplied to the PSE.
- **Perpetual PoE:** Perpetual PoE continuously monitors the PD states and ensures continued power supply to PDs even when the PSE device is hot rebooting.

#### **Green Technology**

H3C S5570S-EI series switches use the latest energy-saving chips and innovative architecture design solutions to achieve the lowest power consumption of gigabit switches, bringing users green, environmentally friendly and energy-saving new network access products and reducing user maintenance costs.

At the same time, H3C S5570S-EI series switches adopt various green energy-saving designs, including autopower-down (port automatic energy-saving). If the interface status is always down for a period, the system

will automatically stop power supply to the interface and automatically enter the energy-saving mode.

Support Energy Efficient Ethernet (EEE) energy-saving function on an Ethernet interface on the RJ-45 ports and low power operations for industry. If the port is idle for a period, the system will set the port to the energy-saving mode, and when there is a packet to be sent and received, it will wake up the port to resume services through the monitoring code stream sent regularly to achieve the effect of energy saving. Meet the EU RoHS standard for material environmental protection and safety.

# **Software Specifications**

| Feature             | S5570S-El switch series                                  |
|---------------------|--|
|                     | GE/10GE port aggregation                                 |
| Port                | Dynamic aggregation                                      |
| Aggregation         | Static aggregation                                       |
|                     | Cross-device aggregation                                 |
|                     | Support IEEE 802.3x flow control (full duplex)           |
| Port                | Supports storm suppression based on port rate percentage |
| Characteristi<br>cs | Supports PPS-based storm suppression                     |
|                     | Support bps-based storm suppression                      |

| Feature             | S5570S-EI switch series  |  |
|---------------------|--|--|
| IRF2                | Distributed device management, distributed link aggregation, and distributed resilient routing |  |
|                     | Stacking through standard Ethernet interfaces  |  |
|                     | Local device stacking and remote device stacking   |  |
| MAC                 | Static MAC address   |  |
| Address<br>Table    | Blackhole MAC address  |  |
|                     | Port-based VLAN  |  |
|                     | MAC-based VLAN   |  |
|                     | Protocol-based VLAN  |  |
| VLAN                | QinQ and selective QinQ  |  |
|                     | VLAN mapping   |  |
|                     | Voice VLAN   |  |
|                     | GVRP   |  |
|                     | DHCP Client  |  |
|                     | DHCP Snooping  |  |
|                     | DHCP Snooping option82   |  |
| DHCP                | DHCP Relay   |  |
|                     | DHCP Server  |  |
|                     | DHCP auto-config   |  |
|                     | IPv4 routing table   |  |
|                     | Static routing   |  |
|                     | RIPv1/v2 and RIPng   |  |
| IP Routing          | OSPFv1/v2 and OSPFv3   |  |
|                     | BGP/BGP4+ for IPv6   |  |
|                     | IS-IS/IS-ISv6  |  |
|                     | Equal-cost multi-path routing (ECMP) and policy routing  |  |
|                     | IGMP Snooping V2/V3  |  |
|                     | PIM-SM/PIM-SSM/PIM-DM  |  |
| Multicast           | MSDP   |  |
|                     | MLD Snooping   |  |
|                     | Multicast VLAN   |  |
| Layer 2 Ring        | STP, RSTP, MSTP  |  |
| Network<br>Protocol |  |  |

| Feature              | S5570S-EI switch series   |  |  |
|----------------------|---|--|--|
|                      | Smart Link  |  |  |
|                      | RRPP  |  |  |
|                      | G.8032 ERPS (Ethernet Ring Protection Switching)  |  |  |
|                      | LLDP/LLDP-MED   |  |  |
|                      | Packet filtering at Layer 2 through layer 4 Traffic classification based on source MAC address destination MAC addresses, source IPv4/IPv6 addresses, |  |  |
| ACL                  | Time range-based ACL  |  |  |
|                      | VLAN-based ACL  |  |  |
|                      | Bidirectional ACL   |  |  |
|                      | Port rate limit (receiving and transmitting)  |  |  |
|                      | Packet redirection  |  |  |
|                      | Committed access rate (CAR)   |  |  |
|                      | Eight output queues on each port  |  |  |
| QoS                  | Flexible queue scheduling algorithms based on ports and queues, including SP, WRR and SP+WRR  |  |  |
|                      | 802.1p DSCP remarking   |  |  |
|                      | ToS(Type of Service)  |  |  |
|                      | Best-effort service/ IntServ/DiffServ   |  |  |
|                      | 802.1p, DSCP, EXP   |  |  |
| Traffic<br>statistic | Sflow   |  |  |
| Forwarding           | Wire-speed/Line-rate architecture   |  |  |
|                      | Port mirroring  |  |  |
| Mirroring            | RSPAN   |  |  |
|                      | mirror session quantity: 4 mirror group   |  |  |
|                      | Hierarchical user management and password protection  |  |  |
|                      | AAA authentication support  |  |  |
| Security             | RADIUS authentication   |  |  |
|                      | HW TACACS+ Authentication   |  |  |
|                      | SSH2.0  |  |  |
|                      | Port isolation  |  |  |
|                      | 802.1X authentication, centralized MAC authentication   |  |  |
|                      | Port security   |  |  |
|                      | IP Source Guard   |  |  |
|                      | HTTPs   |  |  |

| Feature           | S5570S-El switch series  |  |  |
|-------------------|--|--|--|
|                   | EAD  |  |  |
|                   | Support BPDU guard, Root guard   |  |  |
|                   | Dynamic ARP inspection   |  |  |
|                   | Loading and upgrading through XModem/FTP/TFTP  |  |  |
|                   | Zero Touch Provisioning  |  |  |
|                   | Configuration through CLI, Telnet, and console port  |  |  |
|                   | SNMPv1/v2c/v3 and Web-based NMS  |  |  |
|                   | Restful  |  |  |
|                   | Python   |  |  |
|                   | RMON (Remote Network Monitoring) and groups 1,2,3 and 9, alarm event, and history recording. |  |  |
| Management<br>and | IMC NMS  |  |  |
| Maintenance       | System log, alarming based on severities, and output of debugging information                |  |  |
| Maintenance       | NTP  |  |  |
|                   | Ping, Tracert  |  |  |
|                   | Virtual cable test (VCT)   |  |  |
|                   | Device link detection protocol (DLDP)  |  |  |
|                   | Loopback-detection   |  |  |
|                   | Port auto power down   |  |  |
